摘要

The community building has become an important issue in Taiwan in recent years. However, even the government had arranged budget annually to execute various hardware and software construction projects, the physical environment of local communities continued deteriorating. This study aims (1) to examine not only the policies of urban and rural development but also the predicament while performing the community building, and (2) to share teaching experiences in landscape professional courses in the past five years and to introduce how to combine and arrange the professional courses to facilitate the communities to proceed resources investigation, environmental planning and design work. Finally, this research tries to propose an implementing procedure of community building which can accommodate the existing environmental situation and the mechanisms in both the public and private departments.
