## 摘要

Urban planning in the implementation process often takes place (house) the boundary of the main disputes with government departments, the Government also often required to do so issued or cause the amount of state compensation program to stop. In this study, conducted field surveys for such cases and found to be finishing the boundary dispute now mostly urban planning and related partition map using the pile that caused the error between, according to their causes can be divided into policy, management, technology implementation and the four categories. Proposed for the four categories in the study and then asked the reason of interviews with experts to verify. So verification of the results for solution planning and design, the program is in four categories according to the design of minor projects, and finally to the Delphi expert survey of program verification, in order that the program's direction and content can be combined to live. Finally, combined with the recent occurrence of cases in the court verdict is rendered to summarize their research.

**關鍵字** : urban planning, urban planning district to use the pile position, boundary disputes, Delphi method
