## 摘要

The overall quality of military construction tends to be influenced by improper construction management and the potential quality problems, thus, it is important to discover and prevent these common quality problems, measure and analyze the problems, and seek for feasible prevention and improvement measures, in order to enhance the quality of military construction.

This study probes into the common problems in military construction from the perspective of inspection, in order to collect and analyze the problems in construction inspection of different units in recent years. By questionnaire survey, it collects the opinions of scholars, experts and authorities on the prevention and improvement of inspection problems of construction from aspects of construction employers, supervising units, and contractors. Suggestions on improving the construction inspection, including prevention or improvement measures to achieve the optimal outcome, are proposed to enhance the quality of military construction and improve internal engineering management system.
