摘要

In recent years, the South China Sea has been that there is not waiting to solve the question, a lot of countries, to petroleum hidden bitterly under the islands and reefs, natural gas resource around South Asia of countermeasure in various countries all the time, look with covetously eyes all without exception. Accompany by Mainland Chian and Taiwan frequent economic and trade contacts have, stability of political economy impel at the South China Sea topic having, going still one step further cooperative space, visit and develop from island as the example on the ether island, with near the development of natural resources of the islands and reefsing, may cooperate in wanting one, intend to influence Nansha to be near the dispute with sovereign right of various countries to U.S.A., Mainland and no matter Taiwan visit development of resources in military affairs, necessary to cooperate really.

This article, based on policy network, theory, tried to analyze possible cooperation strategy of Mainland Chian and Taiwan. Complement it with relevant literaturereview, the purpose of this article is to consolidate and defend my territorial sovereignty safely. Under the circumstances that population of the whole world increases severely, the development of resources will facilitate China's economic development. Discover sovereignty lays the development of resources aside and common, while mixing with, the cooperative development of platform visits on the island very much, will facilitate the setting-up of the Taiwan Straits mutual trust mechanism in the future.
