摘要

This study to investigate the relationship between the company and the property performance, object of study for the 50 constituent stocks of companies in Taiwan, during the study period from 2002 to 2011, taken from the Taiwan Economic Journal database research methods using multiple regression analysis.

We find: Stake and operating performance of the directors and supervisors unpaired significant relationship. Stake of managers and business performance into the first increase and then decrease nonlinear relationship. Largest shareholding ratio and operating performance as a significant negative correlation.
