### 摘要

Traffic accident is one major cause of student accidents. Hence traffic safety education should be an important task in student safety education. Moreover, schools need to develop traffic accident statistics data for students in and out campus. According to the traffic accidents which often happen in the school neighborhood, schools can focus on teaching in specific traffic safety knowledge and skills. It is necessary to develop traffic safety education courses for local specific traffic safety problems and requirements. Therefore, this study conducts a questionnaire survey to investigate the importance degree of topics in traffic safety education courses from a group of middle-grades students' parents in an elementary school. Nine important teaching topics are identified through the analysis of descriptive statistics, K-Means, and t-test. Results from this study will be a helpful basis in the development of traffic safety teaching topics for middle-grades students in elementary schools.
