摘要

This study based on the analysis of contents of global logistics tries to summarize and classify the global logistics related industries systematically and develop a multi-layer classification framework of global logistics industry. According to the classification framework, we review and search the related laws and regulations used in Taiwan and develop a global logistics related laws/regulations knowledge base by priority, characteristics and importance of laws or regulations. As being a major knowledge base of the “Logistics Information Network” (LINK) website (<http://link.disc.com.tw>), there are hundreds of logistics laws and regulations in this laws/regulations knowledge base. This knowledge base and website could be utilized as a useful tool for the logistics industry in Taiwan.

關鍵字：Global Logistics, LINK Website, Knowledge Base.
