摘要

The purpose of this study was to explore the elementary school teachers' degrees of satisfaction with Educational Resource Website in Changhua county by means of questionnaires. Participants were the teachers in Changhua county. There were 190 questionnaires sent out; 158 ones were back and 150 ones were valid. SPSS for Window 18.0 was processed in data analysis. The statistical methods were: mean and stand deviation of descriptive statistics and regression for data analysis. The findings were as follow:

1. The degrees of teachers' satisfaction with Educational Resource Website were above the average, and information quality was the highest.
2. System quality, information quality, and service quality had positive effects on users' degrees of satisfaction. Users' degrees of satisfaction had positive effects on conditions of use. Users' degrees of satisfaction and conditions of use had positive effects on net benefits.
3. System quality, information quality, and service quality were the most effective factors to users' degrees of satisfaction.

關鍵字：Educational Resource Website, users' degrees of satisfaction
