Abstract

Computers have become an essential part of our lives. We use computer controlled equipment or computer software to complete our tasks easily. Computer can be divided into two parts. The first part, computer hardware, does the physical work while second part, computer software, tells the hardware what to do and how to do it. If you were to think of a computer as a living being, then the hardware would be the body that does things like seeing with eyes, lifting objects, and filling the lungs with air; the software would be the intelligence, interpreting the images that come through the eyes, telling the arms how to lift objects, and forcing the body to fill the lungs with air. Computer software or software, is the collection of computer programs and related data that provide the instructions telling a computer what to do. Computer programmer using a computer programming language or coding and generate the computer software according to user requirement.
