摘要

Since the implementation of the two-day weekend, the increasing demand for leisure and recreation was appeared and changed gradually. A selection from variety of tour itinerary on consumers was conducted. In the past studies, the topics are often based in favor of consumer behavior or management of travel. It was lack of designing a tour itinerary to assess the status of accessible accommodation. The main purpose of this study is to program and design a friendly and comfortable Accessibility tour itinerary in New Taipei City. Results of this study can be used as tourist reference choice of a travel environment, it also supply government and private industry as a space management or development of the reference.
